CENTER FOR STATE & LOCAL GOVERNMENT EXCELLENCE

ISSUE BRIEF

How Will State Unfunded Pension Liabilities Affect Big Cities?

January 2016

ocal governments have a new pension liability number to report on their balance sheets and it is raising tensions, especially for those participating in certain multi-employer state plans.

Starting in 2015, the Governmental Accounting Standards Board (GASB) requires employers that participate in cost-sharing pension plans to report their share of a state's "net pension liability" on their balance sheets.

Alicia Munnell and Jean-Pierre Aubry from the Center for Retirement Research estimate the impact of applying GASB 68 on a sample of cities. While this unfunded pension liability is not a new liability, it had previously been reported on the books of the state government. Reallocating the liability from the state to the cities almost doubles the unfunded liability burden for the 92 cities in this sample that participate in cost-sharing state plans. The study relies primarily on data from 2012 financial reports.

For example, Newark, NJ, does not administer a pension plan of its own, so potential pension funding challenges have not drawn attention. Newark now faces "significant future demands on its revenue because it participates in three of New Jersey's cost-sharing state plans," the authors write.

It is important to keep in mind that the new pension reporting requirements are for accounting purposes. They do not affect the funded status of a pension plan. Whether a city or county has locally-administered pension plans or participates in multi-employer plans, it will need to work with its actuary to determine what to budget each year for its employer contribution.

For a one-page summary of the differences in pension calculations used for accounting purposes (GASB), bond ratings, and budgets, see http://slge.org/publications/understanding-new-public-pension-fundingguidelines-and-calculations.

How Will State Unfunded Pension Liabilities Affect Big Cities?

BY ALICIA H. MUNNELL, JEAN-PIERRE AUBRY*

Introduction

Beginning in 2015, under new provisions of the Governmental Accounting Standards Board (GASB), the unfunded actuarial accrued liability for public pension plans moved from the footnotes of financial statements to the balance sheets of employers. In addition, localities that participate in "cost-sharing" state plans are now required to report their share of that plan's unfunded liability on their books. This *brief* explores the implication of this latter shift.

The discussion proceeds as follows. The first section describes the new GASB provisions. The second section illustrates, in detail, our method for applying GASB 68. The third section presents the estimated impact of GASB 68 on the 92 cities in our sample that are participating in cost-sharing state plans, as well as the overall impact on our full sample of 173 cities. The fourth section compares individual results for selected cities. The final section concludes that forcing cities to recognize their share of the state's unfunded liability may lead them to take more interest in having these liabilities paid off.

New GASB Provisions

To increase the visibility of pension commitments, GASB Statement 68 makes two changes. First, it moves pension funding information from the footnotes to the balance sheets of employers. Second, it requires employers that participate in so-called "cost-sharing" plans to provide information regarding their share of the "net pension liability" on their books. Both changes are significant. Moving information to the balance sheet will raise the salience of pension costs. This analysis, however, focuses on the second change – the allocation of the liabilities associated with cost-sharing plans.

Cost-sharing plans are a type of multiple-employer plan – that is, a plan that provides pensions to the employees of more than one employer. GASB divides multiple-employer plans into two groups – agent plans and cost-sharing plans. In agent plans, assets are pooled for investment purposes but the plan maintains separate accounts so that each employer's share of the pooled assets is legally available to pay benefits only for its employees. In cost-sharing plans, the pension obligations, as well as the assets, are pooled, and the assets can be used to pay the benefits of any participating employer.

To date, funded information for employers in agent plans appears in the notes of their financial statements, so the only change will be moving that information into the balance sheet. In contrast, no information currently appears for employers participating in cost-sharing plans, so the new provisions require determining each employer's share of the net pension liability and including that amount on the balance sheet.

The new GASB statements also introduce new terms. The net pension liability is essentially the unfunded actuarial accrued liability. It is based on a concept of total pension liability, which is the present value of projected benefit payments for current active and inactive employees attributable to past periods of service, calculated using a particular actuarial cost method (traditional entry age). The net pension liability is the difference between the total pension liability and the fiduciary net position (plan assets at fair market value plus any deferred outflows or inflows). Since the data for our exercise are drawn mostly from 2012 reports, three years before the new GASB standards took effect, the discussion uses the familiar terminology of accrued liability and assets.

^{*}Alicia H. Munnell is director of the Center for Retirement Research at Boston College (CRR) and the Peter F. Drucker Professor of Management Sciences at Boston College's Carroll School of Management. Jean-Pierre Aubry is assistant director of state and local research at the CRR.

The Application of GASB 68

Figure 1 illustrates the flow of pension payments from city governments to various pension plans to which they contribute. For most city governments, pension payments include contributions to city-administered plans (often covering general employees and/or police and fire); contributions to non-teacher plans administered at the state level; and, very occasionally, contributions to state teacher plans. Generally, teacher plans receive their contributions from school districts, which raise their own revenue. These types of direct contributions made by the city or school district to the pension plan are represented by the solid lines in the figure. Occasionally, cities transfer funds to the school district, which is represented by the dotted line. Our analysis is limited to cities and does not examine the impact of GASB 68 on school districts.¹

The analysis uses a sample of 173 cities and towns, which includes cities that administer their own local plans, cities that participate only in state plans, and cities that have some combination of the two.² The exercise involves reapportioning assets and liabilities in state cost-sharing plans to participating cities.³

GASB appears to allow some flexibility in how this reapportionment is executed. GASB simply says that the basis for each employer's proportion should reflect its share of the long-run contribution effort and "be consistent with the manner in which contributions to the pension plan … are determined."⁴

For this exercise, the key metric was a city's contribution to a given state plan as a percentage of the plan's total annual required contribution (ARC). If ARC information was not available, the apportionment was

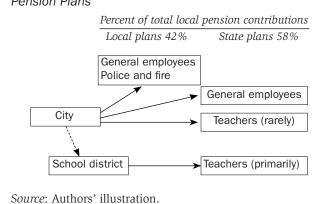

Figure 1. Contributions from Cities and Towns to Pension Plans

based on the ratio of a city's actual contributions to

the state plan's total actual contributions. One would think that other measures, such as the ratio of the city's payrolls covered under the plan to the state plan's total payrolls, might also be acceptable.

A sample calculation for Cincinnati may help clarify the process used for this analysis. Cincinnati participates in three pension plans – one local plan and two cost-sharing state plans. The full assets and liabilities of the local plan are allocated to the city (see Table 1). However, because Cincinnati's ARC payment to the state plans represents only a fraction of the state plans' total ARC, only 0.3 percent of the general employee plan (OPERS) assets and liabilities and 10.0 percent of the police and fire plan (Ohio P&F) assets and liabilities are apportioned to Cincinnati. Finally, the allocated assets and liabilities from all plans are summed to obtain total assets, liabilities, and funded level for the city.

		a	-			
Plan	Plan 1	finances	Percentage to city		City finances

The Impact of GASB 68

Ninety-two of the cities in our sample participate in cost-sharing state plans and are affected by GASB 68. The measure of the impact in this analysis is the change in the unfunded liability relative to a city's own-source revenue (to standardize for city size). As shown in Figure 2, for the 92 cities affected, the unfunded liability as a percentage of revenue rises from 37 percent before GASB 68 to 70 percent after. Of course, because GASB 68 simply shifts the recognition of these liabilities from the states to the cities, the unfunded liability for the states drops by a corresponding amount (in dollar terms).

These aggregate numbers hide much variation. Thirty-seven percent of the 92 cities have their unfunded liability as a percentage of revenue increase by less than 20 percentage points (see Figure 3). However, about a third of the affected cities in our sample – 25 cities – experience increases of over 60 percentage points. For a complete list of the before and after numbers for affected cities, see Appendix Table 1. Strong market returns for fiscal years 2013-2015 will have reduced these percentages somewhat.

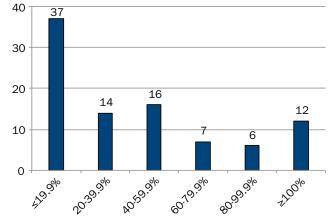

Figure 4 shows unfunded liabilities as a percentage of revenue for the full sample of 173 plans, before and after GASB 68. While the overall impact of GASB 68 on the 92 affected cities within our sample is large, the impact on the 173 cities is much smaller – about 9 percentage points (a 12-percent increase). The reason is that the 92 cities are small; they make up only about a quarter of the total revenue in our sample cities.

Figure 2. Unfunded Liability as Percentage of Revenue for Major Cities Affected by GASB 68, FY 2012

Sources: Authors' calculations based on various FY 2012 plan and government CAFRs; and U.S. Census Bureau (2012).

Figure 3. Distribution of Major Cities Affected by GASB 68, by Change in the Unfunded Liability as Percentage of Own-Source Revenue, FY 2012

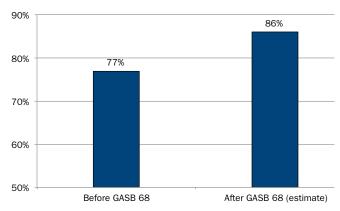

Sources: Authors' calculations based on various FY 2012 plan and government CAFRs; and U.S. Census Bureau (2012).

Comparing Cities after GASB 68

Table 2 reports the cities with the lowest and highest unfunded liability as a percentage of own-source revenue, after state liabilities have been apportioned. Those cities affected by GASB 68 are marked with an asterisk; those without an asterisk do not participate in a state plan. The ratio of a stock (UAAL) to a flow (city revenue) will be high; so, the absolute level of the ratio is not the issue, but rather how the city's ratio compares to the sample-wide average of 86 percent.

Sources: Authors' calculations based on various FY 2012 plan and government CAFRs; and U.S. Census Bureau (2012).

Note that some cities that escape scrutiny altogether when the focus is solely on locally-administered plans emerge as potential problems when the state burden is apportioned. For example, Newark, NJ, which does not administer a plan of its own and therefore is never included in studies of local plans, faces significant future demands on its revenue because it participates in three of New Jersey's cost-sharing state plans.⁵ Thus, GASB 68 will rearrange the state and local pension landscape. For a complete list of the burden for all 173 cities, see Appendix Table 2.

Conclusion

Cities are now required to include on their balance sheets the pension accounting information currently in the footnotes of their financial statements and to report their share of the unfunded liability in cost-sharing plans. This calculation does not create new liabilities; it simply reallocates them from the state to the city. The total impact of this reallocation for our sample of 173 major cities is small – about a 12-percent increase in the unfunded liability – because the largest cities generally do not participate in state plans. However, for the 92 cities in our sample that do participate in cost-sharing state plans, the unfunded liability burden almost doubles.

The key question is whether the reallocation of pension burdens from states to cities will have any impact. Simply reporting part of state plan unfunded liabilities on local government balance sheets will not change the required payments made by local governments: their ARCs already reflect their share of both the normal cost and the payment to amortize the unfunded liability of the state plan. But, local governments – now saddled with a portion of the state plan's unfunded liabilities on their books – may be more interested in seeing the unfunded liability decline over time and will have a vested interest in ensuring that their contributions are doing just that.⁶

Endnotes

- 1 Interestingly, school districts are likely to be among the jurisdictions most affected by GASB 68 as virtually all school districts participate in a cost-sharing state teachers' plan. However, estimating the impact of GASB 68 on school districts is difficult due to the current lack of clarity on how state pension payments on behalf of school districts will be treated.
- 2 The sample of 173 cities was designed to cover the two largest cities in each state, so that the total sample reflects the distribution of population across states. Because the largest cities tend to administer their own plans, additional large cities and towns that participate in state plans were added to the sample in order to capture the variation in pension organization across localities. While the sample covers only 0.5 percent of the 35,879 cities and towns identified in the U.S. Census, it covers about 60 percent of the reported revenue of all cities and towns.

City/state cost sharing may not capture the true impact of GASB 68. Large counties may be more likely than cities to have their own plans and cost share on state plans as well. Future analysis will address this topic.

- 3 The data collected for each city include: 1) the assets and liabilities for each locally-administered plan; 2) the city's portion of the assets and liabilities for each state-administered agent plan (available from footnotes in the city's Comprehensive Annual Financial Report (CAFR); 3) the total assets and liabilities for each state-administered costsharing plan; and 4) a variable for both the city and state plan that can serve as a basis for apportioning a share of each cost-sharing state-administered plan to the city.
- 4 Governmental Accounting Standards Board (2012).
- 5 The three New Jersey plans are: Public Employees' Retirement System, Police and Firemen's Retirement System, and Consolidated Police and Fire Retirement System.
- 6 In fact, one expert we spoke with reported that political tensions have already begun to emerge between a state and local governments involved in its cost-sharing plans.

Helping state and local governments become knowledgeable and competitive employers

About the Center for State and Local Government Excellence

The Center for State and Local Government Excellence helps state and local governments become knowledgeable and competitive employers so they can attract and retain a talented and committed workforce. The Center identifies best practices and conducts research on competitive employment practices, workforce development, pensions, retiree health security, and financial planning. The Center also brings state and local leaders together with respected researchers and features the latest demographic data on the aging work force, research studies, and news on health care, recruitment, and succession planning on its web site, www.slge.org.

The Center's five research priorities are:

- Retirement plans and savings
- Retiree health care
- Financial education for employees
- Talent strategies and innovative employment practices
- Workforce development
